

WHAT IS CLAIMED IS:

1. A chair, comprising:

a first leg;

a second leg pivotally mounted on the first leg; and

5 a seat frame mounted on the first leg and the second leg by a plurality of detachable connecting members.

2. The chair in accordance with claim 1, wherein the second leg is pivotally mounted on the first leg by two screw members and two nuts.

3. The chair in accordance with claim 1, wherein each of the
10 connecting members is substantially inverted U-shaped.

4. The chair in accordance with claim 1, wherein each of the connecting members has an inside formed with an opening facing downward for mounting the first leg or the second leg.

5. The chair in accordance with claim 4, wherein each of the
15 connecting members has a mediate portion formed with a through hole communicating with the opening, the seat frame has a periphery formed with a plurality of screw bores each aligning with the through hole of a respective one of the connecting members, and the chair further comprises a plurality of locking screws each extended through the through hole of a respective one of
20 the connecting members and each screwed into a respective one of the screw bores of the seat frame, thereby fixing each of the connecting members on the seat frame.

6. The chair in accordance with claim 1, wherein each of the connecting members has two sides pivotally mounted on the first leg or the second leg by a screw member and a nut.

7. The chair in accordance with claim 1, wherein each of the
5 connecting members is detachably mounted on the first leg or the second leg.

8. The chair in accordance with claim 1, wherein each of the connecting members is detachably mounted on the seat frame.
